

Utility Patent Application

CONFIDENTIAL INFORMATION

June 10, 2004

Inventor:

Paulette B. Turner

2115 S. Fernwood Drive

Savannah, Ga. 31404

(912) 247-1818 or (912) 354-0294

Personal Voice Emergency Message Alarm Responder Watch, Unit/Multiplex-Unit

CROSS REFERENCE TO RELATED APPLICATIONS

The present invention generally relates to and is similar to a heat censored and or a smoke activated smoke alarm and or emergency devices. It also has similarities to voice answering systems for pre-recorded machines. More particularly to a medical pendant alarm devices with siren warnings and the capabilities to phone for emergency assistance. All the while being portable and able to record vital personal information by a first party to be retrieved by another party.

The present filing was for a Disclosure Document Application of U. S. Filing No. 528790 filed on 04 -02-2003.

Application number 10606377 received on 6-27-01.

DESCRIPTION OF INVENTIONS:

The Personal Voice Emergency Message Alarm Responder, Watch, Unit,
Multiplex-Unit

The PVEMAR device can be worn, carried etc. while assisting with medical, non-medical conditions. It relates to a medical alarm safety device but not limited to environmental emergency conditions, greetings, non-emergency conditions, health conditions, assisting handicaps people and pets, emergency assistance, or medical challenges. Units can be fixed on a wall in a room, but more importantly is portable will allow your recorded personalized voice with all of your life-saving information to be stored and to be released when activated.

The unit can, *as an option*, house a first alarm signal to the fire emergency assistance calling circuit through a telephone to a fire department, police station or other emergency personnel, alerting them of the situation. Allowing a recorded personalized voice to be released when triggered by detection of one or more of heat censored, voice commands, detection, smoke detection, panic button release, pushing of on/off buttons, pull, remote control, thus it will allow a person listening to respond correctly and quickly. With the unit and multiple-unit one is able to place it on every level in their home or business.

Imagine increasing your survival chances because you know all the warning signals to look for; feeling for heat on the other side of the door, looking for dark areas on walls or doors, smelling for smoke, locating escape routes, exits to take, using stairs, not elevators, etc. You will even save lives and time by recording all this information and more. Of course don't forget to tell your family members where your safety destination is located so you will be assured everyone is safe.

DESCRIPTION OF INVENTIONS: continued

With fire safety education right at your fingertips you should draw-up and practice a home fire escape that includes two easy unobstructed exits out of all rooms. Guest will be able to practice after settling in. You will also be able to store important emergency phone numbers.

Once you record a personalized emergency message that will be able to relate instruction to anyone to your love ones. They will be able to retrieve life saving information to assist them while in danger or need. With the panic button/light your guest and your children would be able to push the button over and over again for instructions.

BACKGROUND OF THE INVENTION

Personal Voice Emergency Message, Alarm Responder Watch, Unit/Multi-Unit

Fight fires before they start. As documented, smoke alarms do save many lives. Think of all the people that are found hidden in closets, under beds, in corners and anywhere people think they can escape smoke inhalation. This is one of the greatest reasons people are trapped and die in burning building. They are unaware of the damage smoke inhalation can do and most people panic before they can even get out of the building. Most people don't know how to properly escape in a fire. The majority of fires occur at night when people are asleep. Smoke and poisonous gases from fire can quickly numb the senses and put you into a deeper sleep. Or you can be one of those people who wake up in a disoriented state of mind. Imagine how having the next best thing or person, a PVEMAR unit. It can coach you along as danger invades your home, school, business, work place, or a love one's home.

About 86% of homes has detectors today. Your chances of dying in a home fire are cut nearly in half with a smoke detector. Environmental emergency conditions, such as a smoke, fires, carbon monoxide, tornadoes, floods, earthquakes, etc., can be used for all of these devices.

Almost all fire departments suggest you check batteries monthly as well as changing batteries twice a year. Along with checking batteries check on your very

own personalized-recorded message that will assist anyone no matter where they are in your home. Practice going over the escape plans, from different areas in your home. The most awesome thing is your child will be able to remove the alarm from the wall and carry it with them to save precious and valuable time. Imagine if we had this during 911 at the Trade Center, people could have been tracked for days, easily by activating the panic button.

The American Heart Association and the National Heart, Lung, and Blood Institute have launched a new "Act in Time" campaign to increase people's awareness of heart attacks and calling 911 immediately at the onset of heart attack symptoms. Every second counts. Don't always think you will be around people who will know your symptoms and even if they did would they know what to do? A familiar personalized voice or even your doctor voice is recorded into your PVEMAR watch to store your life-saving personal medical information. Anyone will be able to retrieve the important information you have inside to assist you and call the proper authorities. What is so awesome is that even if you have lost consciousness someone will be able to activate all of your valuable information. That aspirin in your front pocket could save your life. Store this valuable information in your watch. Imagine that if you are a diabetic and you lose consciousness, someone will respond to your PVEMAR watch and be able to assist you while waiting for the proper authorities to arrive. Wouldn't you feel better knowing insulin in your purse could save your life?

With the PVEMAR Multiplex-Unit you will be able to offer your guest an enormous amount of security just knowing that the best instructions to safety is right at their fingertips. How safe do you feel when you are out of town when storm warnings are posted? Do you know emergency numbers to call? Almost all-911 operators might have busy signals. Businesses can greet their guest as they arrive in their rooms with their own personal security escort the PVEMAR. Imagine if a child guest swallowed something poisonous and the front desk was busy. Why waste precious time looking up a number when it can be right at Unit your fingertips. Assuring your guest with their Personal Voice Emergency Message Alarms Responder Unit that will consist of several different types of emergency numbers. Imagine how safe your guest will feel knowing that they have a personal advisor or escort in their own room. This unit will work well in hotels, motels, and daycare centers, retirement homes, jails, elderly home care facilities and so forth. With a PVEMARU insurance companies should be proud to offer lower insurance rates. The unit will be able to assist guest or anyone who is not familiar with a new surrounding in escaping safely out of a building during any type emergency: tornadoes, floods, fires, bombings, earthquakes and so forth. It will be able to tell you where you are located in the building, the closest exit, and the safest place to hide, and so forth. Also with the PVEMARU it can be hand carried when assistance is needed outside of the room. The unit itself would be waterproof, as it would be as effective in floods, on cruises, hurricanes, tornadoes, etc.

FIELD OF INVENTION

The PVEMAR Watch, Unit and Multiplex System

It is therefore an objection to provide a newer and improved emergency medical response alarm system to save lives better, faster, and safer. It has features of some present inventions but provide a newer and improved emergency medical alarm response alarm unit with the capability to have the best time reaction or most efficient medical information, when health and lives are at stake during any type of emergency situations. During any situation the person retrieving the message will not have to guess at what is wrong with the person in need or what type of assistance is needed. A medically challenged person will be able to get out more on their own knowing that real assistance is right at their fingertips. Think of all the people who panic or get sued because they administered the wrong kind of medicine, assistance or did not use the proper procedure. South Carolina had the nation highest death ate in 1988 and 1989. Then it introduced a state wide fire-safety program that emphasized smoke-alarm installation and fire safety education. The state rank had dropped to #6; it is still being used today. By using the PVEMAR Unit you can place fire safety at your guest's fingertips. The most exciting thing is that your guest can go over the procedures ahead of time for reassurance, providing them with the ability to know their exact location at all times. Each device is designed to record, document, register, retrieve, respond, transcript, help or aid any type voice rather personal, electronic, coded, signed, verbal sounds, ect. Any language anywhere in the world can be recorded to give anyone that added security or peace of mind.

BRIEF DESCRIPTION of DRAWINGS

PVEMAR Watch

And also:

Figure # 1B is a front view of a Personal Voice Emergency Message Alarms Responder Watch indicating the front of a single unit with watch band, face, time/text set button, electrical plug/charging unit area, housing unit, right-side area.

Figure # 2B is a back view of a Personal Voice Emergency Message Alarms Responder Pendant/Watch indicating battery compartment

Figure # 3B is a right side view of a Personal Voice Emergency Message Alarms Responder Pendant/Watch outer size.

Figure # 4B is a left side view of a Personal Voice Emergency Message Alarms Responder Watch outer size with play/record rewind button, top view, alarm, text messaging window, siren, and speakers. Unit made of plastic

Figure # 5B is a topside view of a Personal Voice Emergency Message Alarms Responder outer size. Unit made of plastic

Figure # 6B is a bottom side view of a Personal Voice Emergency Message Alarms Responder outer size.
